# The New USC Odontic Seminar

Advanced Concepts in Clinical Prosthodontics

The New Odontic Seminar begins 2009 with an invitation to register for the 34th Annual USC International Periodontal and Implant Symposium. The evidence for implant dentistry is explicit as the BEST treatment option. Informed Consent requires that the patient be informed of the Benefits and Risks of the treatment options. The topic of the 2009 Symposium, "the Negative Outcomes, Complications, and Failures in Periodontal and Implant Therapy," is an important one for all restorative dentists to know, appreciate, and understand.

This year's meetings will continue to feature advanced concepts that are PATIENT BASED rather than PROBLEM BASED focusing on the longitudinal treatment of patients that span the lifetime of one's practice. Where is the balance between evidence based treatment planning and clinical based treatment options?

The plethora of new technologies and developments in restorative dentistry courses allows the individual interested in prosthodontics to explore other areas of clinical dentistry with a core of prosthetic oriented principles.

This year's program will begin with Advanced Concepts in Ceramic Restorations, comparing metal ceramic to all ceramic restorations. Advanced Restorative concepts must begin with CAMBRA - A Caries Management By Risk Assessment protocol that is essential to every restorative dentist treating adults. We continue to concentrate on developing reference material and web-based information that will allow the practitioner to apply principles of prosthodontics for the benefit of the patient.

The New Odontic Seminar will explore diagnosis and treatment planning in a seminar format, based on options considering EBD, the patient, quality of life and treatment outcomes, new materials and procedures.

Besides advanced techniques in removable prosthodontics, a new algorithm for treating edentulous patients for complete dentures and implant supported prostheses is proposed. Dentist, assistants, and dental technicians will be interested in how to use them efficiently and effectively. The objective of treatment planning is to bring together endodontists, periodontists, orthodontists, prosthodontists, and oral surgeons to actively interact with restorative dentists to develop PATIENT BASED treatment plans. I hope you will join us to continue your support of the USC New Odontic Seminar.
