SYNOPSIS

Have you ever had a routine dental extraction that turns ugly? Don't let minor complications such as broken root tips stump you! Learn how to manage oral surgery cases with confidence and minimal stress. This all-day lecture course is designed for general dentists who want to expand their oral surgery experience and better understand and manage dento-alveolar surgical procedures. This comprehensive course will offer you, the general practitioner, an opportunity to better handle your extraction cases, manage complications and know what to avoid.

Upon completion of this course you will be able to:

- Perform pre-operative patient evaluation and assess difficult extractions
- Manage medically compromised patients
- Prescribe medications most commonly used for oral surgery
- Apply effective local anesthesia techniques
- Know how to use instrumentation for dento-alveolar surgery
- Tissue management and flap designs for various surgical procedures
- Apply principles of exodontia to effectively retrieve broken root tips
- Manage complications
- Socket preservation (hard and soft tissue) for dental implants

REGISTRATION FEES
