OVERVIEW

CDC data have estimated that despite the decline in proportion of edentulous persons in the United States, the projected number of edentulous patients will increase over the next decades due to the population growth. It is now accepted that implant restorations is often the most conservative treatment for tooth replacement. This 9-day course consists of lectures, hands-on workshops and live surgery demonstration and is designed to provide the theoretic framework, as well as the skills necessary for clinicians to incorporate implant dentistry into their practice.
